

LACKER

Lösungen aus Metall und Glas

FACADE SYSTEMS 2

LIGHT SPACES

MADE FROM GLASS AND METAL

Glass and metal add a fascinating transparency to all types of buildings and structures. Drawing on its expertise in the field of facade technology, LACKER works with architects, designers and clients to deliver highly complex projects. No challenge is too great for our engineers and technicians. Indeed, complexity makes the task all the more appealing.

Our know-how is particularly in demand whenever the design brief calls for sophisticated facade and window assemblies made from glass and metal. We help to devise feasible solutions for unconventional facades, glass roofs and special constructions. From the first sketch to in-house fabrication and on-site installation by our company's own operatives, 100%

LACKER GmbH

made in Germany is guaranteed.

LACKER's track record of design and manufacturing in the Black Forest town of Waldachtal extends back almost six decades. Our entire workforce realizes the importance of catering for the discriminating wishes of our customers with the necessary passion for perfection. Down to the very last detail! Ongoing training and continuing professional development guarantee our company's consistently high quality standards.

If you are looking for a reliable fenestration and facade system partner capable of crafting exceptional glass and metal solutions, then why not learn more about us?
